$$X \sim \mathcal{N}\left(\mu = 12, \quad \sigma^2 = 0.02^2\right)$$

0.) On cherche $P(X > 12.05)$

$$P(X > 12.05) = 1 - P(X \le 12.05)$$

$$\mathbb{P}(X \in b.) \left(= \underbrace{\overline{\Phi}(\underline{b} - \underline{M})}_{\underline{b}} \right)$$

$$P(X_{7}c) = 1 - P(X \le c) = 1 - \overline{p}(\frac{c - 12}{0.02}) = 0.9$$

$$\Rightarrow \overline{\phi}\left(\frac{12-c}{0.02}\right) = 0.9$$
